

Table 1. Estimated density and abundance of fin whales identified with high, medium and low confidence from the combined platforms. Totals are shown for T-NASS dedicated (D) and extension (E, shaded) vessels.  $n$  - number of sightings;  $L$  - effort (nm);  $E(S)$  - group size;  $esw$  - effective search half width (m);  $f(0)$  - probability density of the detection function at distance 0;  $D$  - density of animals (number nm $^{-2}$ );  $N_s$  - abundance uncorrected for perception bias; LCL and UCL - upper and lower confidence limits.
