

CLARINO Bergen Repository

CLARINO is a Norwegian infrastructure project aiming to make existing and future language resources easily available and accessible to everyone

Hemed Al Ruwehy
Rune Kyrkjebø
Øyvind L. Gjesdal

hemed.ruwehy@uib.no

oyvind.gjesdal@uib.no

Features of the repository

- The repository enables everyone to search for language resources and tools
- It enables registered users to deposit data so that anyone can find them, use them and correctly cite them
- Users can be authenticated using local accounts or using their national identity providers (IdP)
- Every web-accessible resource is assigned with persistent identifier (PID); In this way, the resource is ensured to be permanently available
- The repository provides endpoint for metadata harvesting through OAI-PMH
- Various metadata formats are supported for harvesting – CMDI+XML, HTML, BIBTEX, DC etc
- Users have an option of uploading metadata files that are created from other sources
- License handling – various licenses are integrated to the repository

ACKNOWLEDGEMENTS

The University of Bergen Library thanks CLARIN, LINDAT/CLARIN, CLARINO and prof. Koenraad de Smedt, Paul Meurer, Gunn Inger Lyse Samdal, Talan Memmott and all who have helped

What significance does the repository has to the University Library?

- A new type of cooperation between library and researchers
- A new type of storage with a large reach and a promise of added value for the research data
- The repository is both a local and a European function, hence the Library expands it's role as a research infrastructure
