

RDA is an open international network that works for sharing of research data

RDA in Norway

Norway is currently establishing a national node in the RDA network. NSD is the coordinator of the node, which also consists of NTNU, UiB, UiO, UiT, Unit and Uninett/Sigma 2.

The node will help disseminate knowledge about data management and data sharing, promote activities and engagement, and represent Norwegian interests in RDA. Main focus will be on areas such as FAIR Data Stewardship, Data Management Plans, and management of sensitive data.

On the Norwegian node forum site we share relevant news, events and activities.

RDA is for everyone who is interested in open science and sharing of research data.
