Global Sustainability Coalition for Open Science Services

A tried and tested solution to support OS infrastructure in need of immediate funding

https://scoss.org @scossfunding

Challenge: OA & OS infrastructure has grown in number and usage and may no longer be sustainable providing no pathway forward for continuation and further development.

Risk: Services risk stagnation, downsizing or pay walling.

Aim: Helping sustain the infrastructure to support the implementation of OS

Officially formed in early 2017, SCOSS's purpose is to provide a new co-ordinated cost-sharing framework that will ultimately enable the broader OA and OS community to support the non-commercial services on which it depends

Two Infrastructures enabling Open Access Books

Eelco Ferwerda

15th Munin conference 18 November 2020

Two Infrastructures enabling Open Access Books

- Dedicated to Open Access Books
- Focus on peer reviewed monographs and edited collections
- Providing quality assurance and transparency based on peer review
- Non-profit Foundations (no ownership)
- Community based
- Developed on open source platform (DSpace)

Two Infrastructures enabling Open Access Books

OAPEN Library

- Repository of freely accessible academic books. An ongoing effort to build a
 quality-controlled collection of Open Access books together with
 publishers, research funders and libraries.
- Providing services in the areas of deposit, quality assurance, metadata enhancement, dissemination, usage analytics and digital preservation

Directory of Open Access Books (DOAB)

- Directory of peer reviewed Open Access books and book publishers.
- The primary aim is to provide a reliable source for OA book metadata, OA publishers, to enhance discoverability, and maximize dissemination and visibility
 - an industry resource uniting all Open Access Books

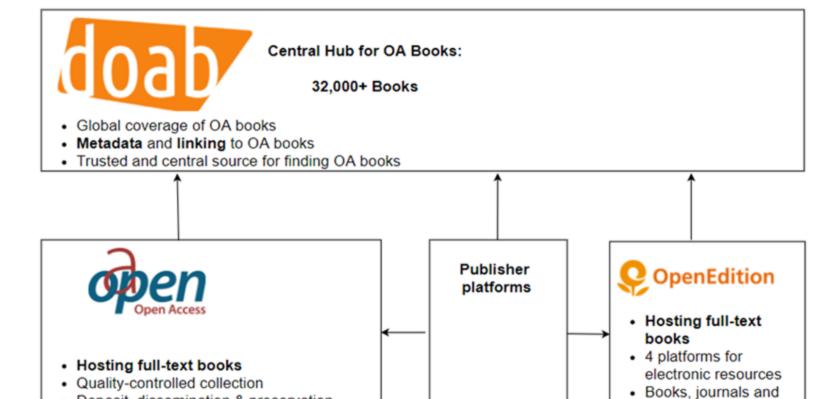

Deposit, dissemination & preservation

OAPEN & DOAB: Synergies and Differences

various services

DOAB Foundation

- Established as independent, non-profit foundation in 2019
- Partnership between OAPEN and OpenEdition
- Governance structure with stakeholder and scientific committees
- Introduced Library membership program
- Introducing Certification service for OA books and book publishers with OPERAS
- Redeveloping DOAB as open source platform on DSpace

How you can help

A scholarly infrastructure that provides open bibliographic and citation data worldwide

Web Twitter Blog

OpenCitations: goals

OpenCitations has been established as a fully free and open infrastructure to provide access to global scholarly bibliographic and citation data, of quality and coverage to rival those from proprietary services, e.g. Clarivate Analytics' Web of Science (WoS) and Elsevier's Scopus

OpenCitations enables

- Fairness: it avoids institutions and independent scholars having to pay tens of thousands of dollars annually (that most of them cannot afford!) for commercial access to their own scholarly data
- Reuse: no license restrictions, since the data are provided under CC0, so users can republish and reuse for any purpose the citation data that OpenCitations provides
- Research assessment: by providing crucial data for national and international research evaluation exercises
- Governance: community involvement

OpenCitations: information and data

OpenCitations (http://opencitations.net) is an independent infrastructure organization

- dedicated to open scholarship and the publication of open bibliographic and citation data by the use of Semantic Web technologies
- engaged in advocacy for open citations and open bibliographic metadata

It provides:

- a data model: the <u>OpenCitations Data Model</u> (based on the <u>SPAR Ontologies</u>)
- bibliographic and citation data (CC0): <u>OpenCitations Corpus</u>, <u>COCI</u>, <u>CROCI</u>
- software: in our <u>GitHub repository</u>, released with open source licenses
- online services: <u>REST APIs</u>, <u>SPARQL endpoints</u>, <u>dumps</u> and <u>interfaces</u>

Using our data

We provide data containing more than 7 hundred million citations that the community can use for any purpose

Such data can be crucial as a vehicle for use in national and international research evaluation exercises to make such activities more transparent and reproducible as compared to other proprietary services

You can use our citation data (e.g. via our REST API) to enhance or develop tools to support your authors, researchers, students, institutional administrators, for instance by providing metrics to monitor research at your institution and by improving the discoverability of research products such as publications and data

Two ways to help

Ask your institution to apply for membership and thus support us financially

- Supporting membership (€500 €8,000 per year)
 Rights include: voting on the OpenCitations Council and to elect candidates to serve on the International Advisory
 Board for OpenCitations
- Development membership (€8,000 €30,000 per year)
 Rights include: Supporting membership rights + one free registration for next edition of Workshop on Open Citations and Open Scholarly Metadata and writing blog post about your use of OpenCitations services and data on our blog
- Strategic membership (more than €30,000 per year)
 Rights include: Development membership rights + a seat on the International Advisory Board for OpenCitations

Otherwise, ask your institution to fund us via a donation

SCOSS & PKP Sustaining Open Infrastructure

About us.

- The Public Knowledge Project (PKP) is a non-profit, research and open source software development initiative established in 1998 at the University of British Columbia (Canada).
- Today, its administrative home is at Simon Fraser University (Canada) and its research division is led from Stanford University (USA).
- Community governance structure via our international Advisory and Technical Committees.

What we do.

- Best known for creating and maintaining Open Journal Systems (OJS), the world's most widely used free and open source software for managing the editorial workflow and display of open access journal articles. Also develop and maintain Open Monograph Press (OMP) and Open Preprint Systems (OPS).
- Provide free documentation, free online courses, and free technical support for our users.

Why we do it.

- Increase the availability, accessibility, and quality of open access content.
- Expand the diversity of voices and perspectives being heard in global scholarly communications.

Why it matters.

- OJS is used by over 10,000 journals around the world in over 40 languages, including Norwegian.
- OJS is used as a national publishing portal in a number of countries, including Finland, Denmark, and Sweden, with more in progress.
- With over half of OJS journals in the Global South, it expands the diversity of voices participating in the scholarly conversation.
- OJS is the largest platform used by journals in the Directory of Open Access
 Journals (DOAJ). More than 40% of journals indexed in the DOAJ identify OJS as
 their publishing platform.

Why we need your help.

- Creating and supporting open content is not free.
- The future of scholarly publishing is open access but this future should not be controlled by large commercial interests.
- Sustainable, affordable, community-controlled open access requires financial support for open infrastructures.

Why you should help.

PKP membership provides your institution with benefits, including participation on community governance committees, access to member-only events, and opportunities to provide direction on future software releases.

Your support helps to:

- Ensure free content continues to be available.
- Ensure locally-controlled, non-profit publishing can continue.
- Ensure our software continues to exist, to improve, and be part of the future.

How you can help.

To help fund the Public Knowledge Project (pkp.sfu.ca), contact:
